DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on Nov 6, 2003 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-6 and 8-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kato, JP 9-254821 in view of Notake et al., U.S. Patent 6,006,626.

Kato shows, in Figs. 1-21, a pedal bracket structure comprising;
a pedal bracket 22 fixed at a front end portion to a toe board 20;
a pedal lever 18 rotatably supported in a vicinity of a rear end portion of the pedal bracket via a pedal lever pivot 28;

wherein the pedal bracket comprises a rigidity supplementing portion (on the left side of the bracket) in the vicinity of the front end portion of the pedal bracket and a brittle portion 26-2a at a rear side of the rigidity supplementing portion;

wherein the brittle portion is ahead of the pedal lever pivot in a longitudinal direction of the pedal bracket;

a rigidity increasing member (the upper portion of the bracket) between the pedal lever pivot and a vehicle body, and which is located at the rear of the pedal bracket;

wherein the rigidity increasing member comprising a switch bracket 32 fastened to the pedal bracket together with the pedal lever pivot and a rigidity supplementing bracket 38 disposed between the switch bracket and the vehicle body, wherein the rigidity supplementing bracket is aligned with and fixed to the switch bracket;

wherein the brittle portion comprises a semi-circular shape hole or a slit formed therein (after collision);

wherein the switch bracket is saddle shaped;

wherein the pedal bracket comprises a rigidity supplementing plate 24 attached to the rigidity supplementing portion; and

wherein the rigidity supplementing portion and the brittle portion are contiguous;

but fails to show the rigidity supplementing portion being outwardly swollen with a swollen bead or a curved rib.

Notake et al. shows, in Fig. 13, a pedal bracket structure comprising an outwardly swollen rigidity supplementing portion 108 having a swollen bead or a curved rib shape in the vicinity of the front end portion of the pedal bracket.

Art Unit: 3682

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the bracket structure of Kato with the outwardly swollen rigidity supplementing portion as taught by Notake et al. in order to provide increased rigidity so that any further deformation caused by collision may be prevented and thus lowering the repairing cost.

Response to Arguments

4. Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.
